SUMMARY

Computer Engineering student with experience in process automation, backend development, and ETL pipelines using Python, PostgreSQL, and Selenium. Currently working at Grupo Equatorial developing internal systems, integrations, and performance optimizations for legal and operational workflows. Interested in backend engineering, data engineering, and distributed systems.

SKILLS

Languages:	Python, Java, C/C++
Backend & Data:	PostgreSQL, MySQL, SQL Server, Pandas, ETL, REST APIs
Tools:	Git, Docker, Linux, Selenium, Power BI
Languages Spoken:	Advanced

Experience

- Grupo Equatorial** | Software Engineering and Automation InternMar 2024 – Present
- Developed and optimized internal systems using Python, PostgreSQL, and Selenium, improving operational efficiency and reducing manual processes.
 - Implemented performance improvements in ETL pipelines and legal automation workflows using parallel processing, vectorized operations, and SQL query optimization.
 - Reworked PostgreSQL integrations using connection pooling and parameterized queries, improving scalability and database performance.
 - Developed dashboards and automation workflows to support data analysis and decision-making across multiple departments.

Projects

- ConsumidorGOV-Scraper** | Python, Selenium, Pandas | GitHub
- Developed an automated data extraction and processing pipeline for Consumidor.gov using Python, Selenium, and Pandas.
 - Implemented ETL routines and performance optimizations for structured complaint data analysis.
- Beret** | CLI, Automation, Python | GitHub
- Developed a modular Python CLI focused on automation and developer productivity.
 - Implemented an extensible architecture designed to optimize workflow automation.

Research Experience

- UEMA | PIBIC – Ocean Energy Conversion Device**2022 – 2023
- Contributed to the development of experimental solutions for ocean energy conversion.
 - Assisted with modeling, technical documentation, and experimental evaluation.
- UEMA | PIBITI – Babassu Coconut Processing Project**2024 – 2025
- Participated in research focused on technological solutions for babassu coconut processing.
 - Assisted in technical documentation and prototype modeling for experimental evaluation.

Teaching Experience

Teaching Assistant – Fundamentals of Electricity, Magnetism and Optics

2023

- Assisted students during laboratory classes and exam preparation sessions.

Teaching Assistant – Analog Electronics

2024

- Developed circuit simulations and practical exercises for electronics courses.

Education

State University of Maranhão (UEMA)

Bachelor's Degree in Computer Engineering

São Luís, Brazil
Jan 2021 – Aug 2027

Certifications

Artificial Intelligence Training – IFMA (100h)

Fundamentals of Artificial Intelligence and Machine Learning.

Java with Spring Boot – DIO / Claro (75h)

Backend development with Java, Spring Boot, and REST APIs.

Power BI for Data Analysis – ENAP (25h)

Data visualization and dashboard development.
